COLEMAN® CLIMATE CONNECT™

DESIGNED FOR EVERYWHERE.

Coleman® Climate Connect™ enables Echelon™ Series systems to be perfectly tuned to the outdoor environment in which they are located. Humid, dry or normal condition settings allow contractors to set up systems faster and more accurately. And by optimizing how an Echelon™ Series system operates, Climate Connect™ can maximize overall efficiency and provide improved homeowner comfort.

AS SIMPLE AS 1-2-3

Climate Connect™ features three different climate settings the contractor can choose from when installing the unit. The settings (humid, dry or normal) are selected based on the outdoor climate in which the conditioned space is located.

FASTER SETUP, BETTER RESULTS

Since configuring the system for its applied climate is available at the press of a button, more time can be dedicated to fine-tuning the system to address specific comfort challenges. This means faster installation and an efficient, custom comfort solution in minimal time.

WORKING TOGETHER

Unlike systems that only optimize the blower, Climate Connect™ optimizes how the indoor blower and outdoor compressor work together, streamlining the system for specific applications that maximize comfort while increasing efficiency.

INNOVATION FROM COLEMAN® HVAC

Our commitment to excellence allows us to develop new and innovative products in the HVAC industry. That’s why, when it comes to home comfort, you can rely on the legendary quality of Coleman® HVAC. Visit www.ColemanAC.com to learn more.
