# Indoor Air Quality solutions for your comfort

## Breathe Deep with Indoor Air Quality Products from Coleman®

After a long day at work or running errands, the last thing you want to think about is your indoor air quality. However, with studies from the U.S. Environmental Protection Agency showing that indoor air can be more polluted than the air outside, your home may not be quite the safe haven you think. Fortunately, Coleman® heating and air conditioning has a complete line of indoor air quality products to combat poor air quality and its effects. With extra comfort and added efficiency, coming home never felt so good.

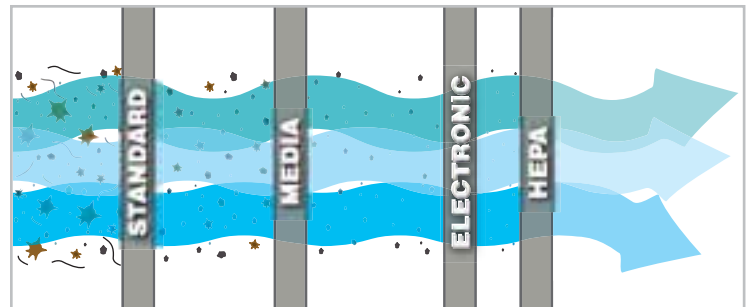

## Filtration

Getting particular about particles.

Pollutants and particles the size of a micron (one-millionth of a meter) can easily go unfiltered, leaving behind dust, pollen, pet dander, and bacteria. These pollutants are the culprit of allergies and the layer of film covering furnishings, walls, and draperies. With three different air cleaners to choose from, your air will be cleaner and allergy symptoms reduced. Coleman® high-quality air cleaners include:

- **Media Air Cleaner**  
Captures: airborne dust, pollen, and other contaminants  
Filter replacement: every six or 12 months
- **Electronic Air Cleaner**  
Captures: dust, smoke, mold spores, pet dander, and more  
Filter replacement: washable, no replacing
- **HEPA Air Cleaner (three filter system)**  
Captures: 99.97 percent of particles 0.3 microns or larger  
Filter replacement: varies, dependent on each filter

Ask your Coleman® heating and air conditioning dealer which filtration system will work best for your home, your family, and your region.

*Whole-house filters can capture up to 98% of airborne particles passing through the duct system.*

## Moisture Control

From dry, itchy skin to sticking to your leather couch, the moisture (or lack of it) in your home can really decrease your quality of life. Coleman® humidifiers reduce the effects of dry air like scratchy throat and static electricity while our dehumidifiers lessen side effects of too much humidity, such as allergies and asthma attacks.

### Humidifiers—Replenishing moisture, repelling chapping and zapping.

With three different humidifiers to choose from, the effects of dry air are reduced while making your home feel warmer, translating into savings in your utility bill. Lowering your thermostat by as little as three degrees can reduce annual heating bills by as much as five percent. Coleman® humidifiers include: **Steam Humidifiers, Power Humidifiers, and Bypass Humidifiers.**

# fort and health

## Dehumidifier—Condensing humidity, expanding comfort.

Our Whole House Dehumidifier works double duty to eliminate excess moisture and prevent toxic mold growth throughout your home. The result? A healthy, comfortable lifestyle. Plus, our dehumidifiers are energy efficient and can remove up to 130 pints of moisture per day.

Talk to your Coleman® heating and air conditioning dealer to determine which moisture control system will work best in your home.

## UV Air Purification

Put harmful bacteria under the spotlight.

Your system's evaporator coil can be a breeding ground for bacteria and mold to form, which can then be transferred inside your house. These pollutants can lead to illness, allergies, and odors in the home. The UV Air Purification System stops mold in its tracks by radiating germ-killing levels of ultraviolet light through a 50 watt UVC lamp.

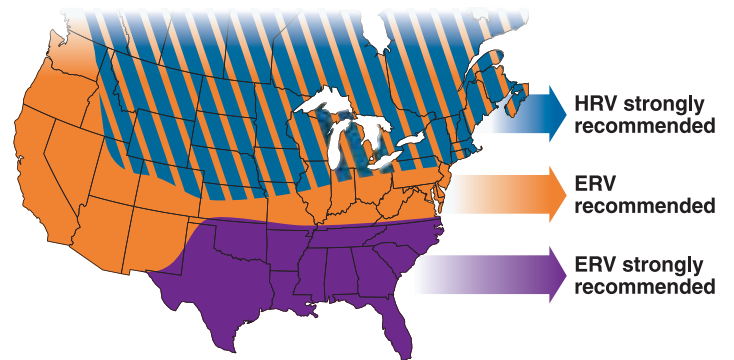

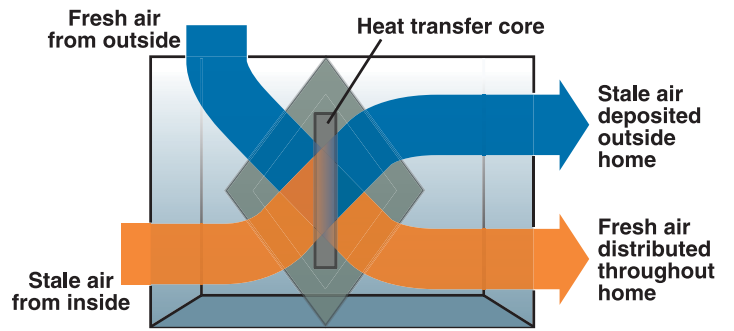

# Heat and Energy Recovery Ventilators

Air so fresh, you won't believe you're indoors.

With homes being built tighter than ever, pollutants and allergens become trapped indoors. Germs, dander, and mold are just waiting to be inhaled, causing asthma, allergies, or worse. That's why it's so important to ventilate the stale air your family breathes on a daily basis with fresh air. A ventilator swaps stale air with fresh, via a fan-powered system. Coleman® Energy Recovery Ventilation Systems can recover up to 80 percent of the energy exchanged—resulting in lowered utility bills. Coleman® heating and air conditioning offers two types of ventilators:

- **Heat Recovery Ventilator**—Ideal in northernmost climates, HRVs replace stale air from inside your home with fresh, extracting 70 to 80 percent of the heat from the stale air. The extracted heat is used to warm the incoming fresh air before entering the house via an energy-efficient fan-powered system.
- **Energy Recovery Ventilator**—Most cost-effective in climates with extreme winters or summers, ERVs perform the same functions as HRVs, but with the added benefit of controlling moisture in the home.

## Warrantied for years of comfort

Every Coleman® indoor air quality product is backed by a 5-year limited warranty.
